The Aalto Science Institute internship programme offers undergraduate students (BSc level) the opportunity to participate first-hand in topical research, to interact with the premier research groups at Aalto University, and to network in an international environment.

Positions are available in several fields of study ranging from mathematics, physics and computer science to e.g. complex systems and brain research. AScI interns are usually hired for three months, and the typical training period is from June 1 until August 31. The interns are employed by the departments of the School of Science, and the exact timing of the internship may be agreed with the hosting department. The incoming students are mentored through the stay by one of the professors affiliated with AScI. The priority for incoming asci-internship positions is given to students, who have not yet been studying or working at Aalto. In addition, these positions are targeted for students coming from Aalto-partner universities. AScI internship students will receive a salary, which is sufficient to cover living costs for example accommodation. The salary is determined based on experience and qualifications according to the salary system of Aalto University for student interns. Minimum internship salary is 1600 €/ month.
