

innoSPICE - Knowledge and Technology Transfer Assessment at Vilnius University

Antanas Mitasiunas, David Wewetzer

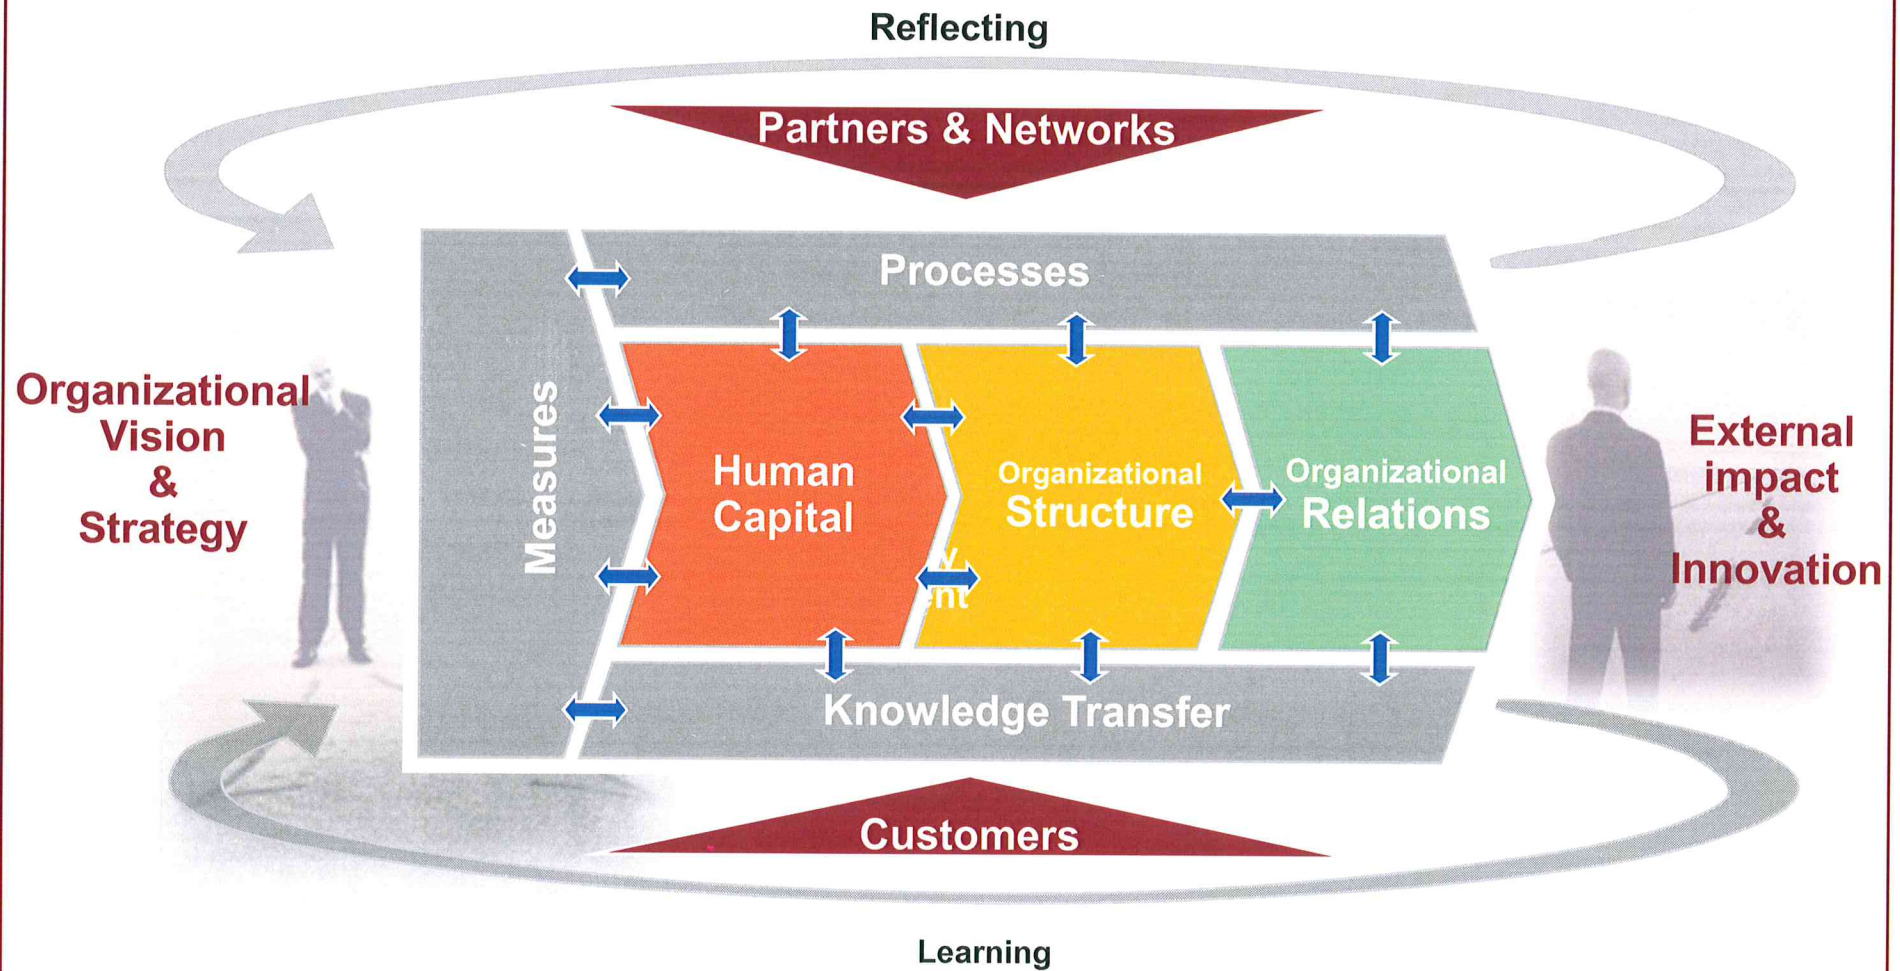

TP-UNI
Idėjas paverčiant verslu!

Three major actors' roles are basic elements in Innovation eco-system management – optimized processes are key to leverage research efforts.

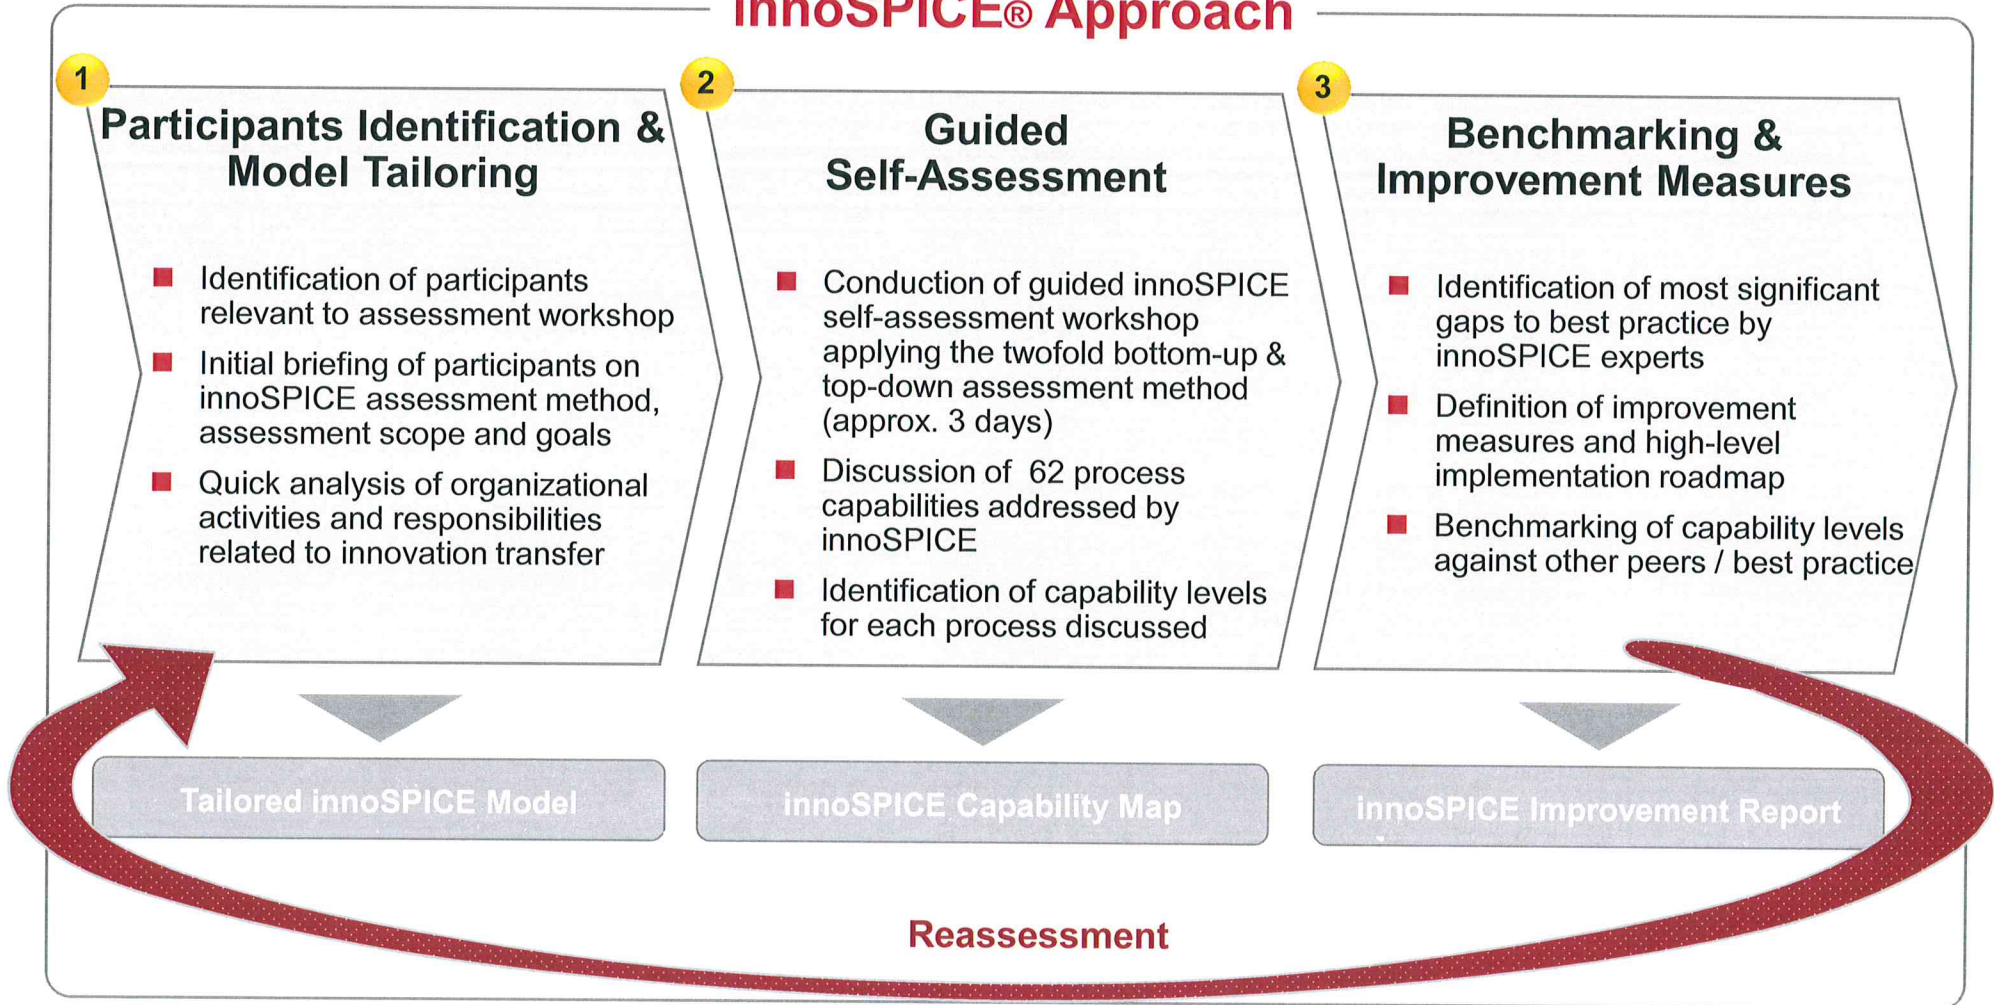

Influencing factors on organizational Knowledge Transfer

innoSPICE facilitates the continuous improvement process of innovation and technology transfer by a structured assessment approach in three steps

innoSPICE® Approach

Source: innoSPICE ISO 15504

Turning research and science into reliable knowledge suppliers for sustainable partnering and cooperation activities

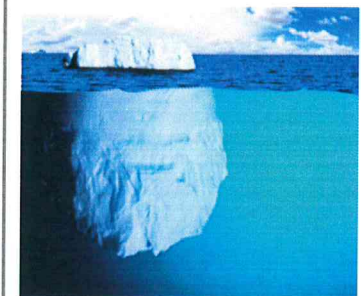

Organizational Status Quo Classification

- **Current level of competence and skill in the organization**
- **Inherent structural conflicts vs defined interfaces**
- Enable Self- or External **Evaluation** according to a standardized framework

Uncovering of Hidden and Unused Capabilities

- Provide an adaptable base to establish a quality management system in KTT for **continuous improvement**
- **Improvement potentials** on the operational level
- **Raise awareness** for the need of specific capabilities to perform successful KTT activities and implement IP strategies.

Process & Quality Improvement Suggestions

- **Structural improvement suggestions** and an **implementation roadmap**
- Enable **Certification** of Knowledge Transfer Capabilities to document organizational alignment to professional IP management and exploitation of results
